IMPORTANT INFORMATION ABOUT LEAD FREE, (PbF),

SOLDERING

If lead free solder was used in the manufacture of this product the printed circuit boards will be marked PbF.

Standard leaded, (Pb), solder can be used as usual on boards without the PbF mark.

When this mark does appear please read and follow the special instructions described in this manual on the use of PbF and how it might be permissible to use Pb solder during service and repair work.

# 1. ABOUT LEAD FREE SOLDER (PbF: Pb free)

Note:

In the information below, Pb, the symbol for lead in the periodic table of elements, will refer to standard solder or solder that contains lead.

We will use PbF solder when discussing the lead free solder used in our manufacturing process which is made from Tin, (Sn), Silver, (Ag), and Copper, (Cu).

This model, and others like it, manufactured using lead free solder will have PbF stamped on the PCB. For service and repair work we suggest using the same type of solder although, with some precautions, standard Pb solder can also be used.

Caution

- **PbF solder has a melting point that is 50° ~ 70° F, (30° ~ 40°C) higher than Pb solder. Please use a soldering iron with temperature control and adjust it to 700° ± 20° F, (370° ± 10°C). In case of using high temperature soldering iron, please be careful not to heat too long.**
- **PbF solder will tend to splash if it is heated much higher than its melting point, approximately 1100°F, (600°C).**
- **If you must use Pb solder on a PCB manufactured using PbF solder, remove as much of the original PbF solder as possible and be sure that any remaining is melted prior to applying the Pb solder.**
- **When applying PbF solder to double layered boards, please check the component side for excess which may flow onto the opposite side (See figure, below).**

solder

1.1. SUGGESTED PbF SOLDER

There are several types of PbF solder available commercially. While this product is manufactured using Tin, Silver, and Copper, (Sn+Ag+Cu), you can also use Tin and Copper, (Sn+Cu), or Tin, Zinc, and Bismuth, (Sn+Zn+Bi).
Please check the manufacturer's specific instructions for the melting points of their products and any precautions for using their product with other materials.
The following lead free (PbF) solder wire gauges are recommended for service of this product: 0.3mm, 0.6mm and 1.0mm.

0.3mm X 100g	0.6mm X 100g	1.0mm X 100g

1.2. HOW TO RECOGNIZE THAT Pb FREE SOLDER IS USED

PbF is stamped to show that Pb free solder is used. (See the figure below.)

2. FOR SERVICE TECHNICIANS

ICs and LSIs are vulnerable to static electricity.
When repairing, the following precautions will help prevent recurring malfunctions.

1. Cover the plastic parts boxes with aluminum foil.

2. Ground the soldering irons.

3. Use a conductive mat on the worktable.

4. Do not touch IC or LSI pins with bare fingers.

3. SPECIFICATIONS

Station Loop Limit:	90 ohms
Calling Method:	2 pair wire
Jacks:	Handset Jack, TEL Jack, Headset Jack
Dimensions:	Low Angle: 265 (D)mm [Operate] × 208 (W)mm × 128 (H)mm (10 $7/16$" × 8 $3/16$" × 5 $1/32$")
	High Angle: 212 (D)mm [Operate] × 208 (W)mm × 202 (H)mm (8 $11/32$" × 8 $3/16$" × 7 $15/16$") 213 (D)mm [Base] (8 $3/8$")
Weight:	1.13kg (39.86 oz.)
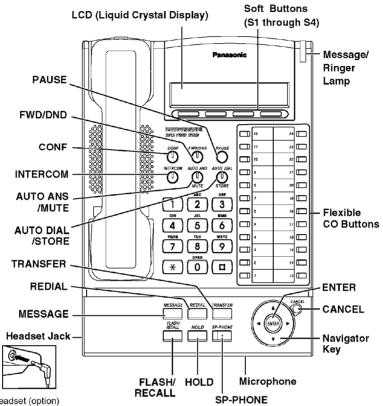

Design and specifications are subject to change without notice.

4. LOCATION OF CONTROLS

FLASH/ RECALL   HOLD

SP-PHONE

Microphone

* Headset (option)
  Recommended: KX-TCA86, KX-TCA91, KX-TCA92
  Do not use a KX-T7090 headset.

4

PAUSE:
Used to insert a pause when storing a telephone number. This button also functions as the PROGRAM button when there is no PROGRAM button on your telephone.

FWD/DND (Call Forwarding / Do Not Disturb):
Used to perform Call Forwarding or Do Not Disturb.

CONF (Conference):
Used to establish a multiple-party conversation.

INTERCOM:
Used to make or receive intercom calls.

AUTO ANS (Auto Answer) / MUTE:
Used to receive an incoming call in hands-free mode or mute the microphone/handset during a conversation.

AUTO DIAL / STORE:
Used for System/Personal Speed Dialling or storing program changes.

TRANSFER:
Used to transfer a call to another party.

REDIAL:
Used to redial the last dialed number.

MESSAGE:
Used to leave a message waiting indication or call back the party who left the message waiting indication.

FLASH/RECALL:
Used to disconnect the current call and make another call without hanging up.

HOLD:
Used to place a call on hold.

**SP-PHONE (Speakerphone):**
Used for the hands-free operation.

Navigator Key :
Used to adjust the volume and the display contrast or select desired items.

CANCEL :
Used to cancel the selected item.

ENTER :
Used to confirm the selected item.

CO:
Used to make or receive an outside call. Pressing this button seizes an idle outside line automatically. (Button assignment is required.) Also used as feature buttons. (Button assignment is required.)

Message/Ringer Lamp:
When you receive an intercom call, the lamp flashes green, and on an outside call, the lamp flashes red. When someone has left you a message, the lamp stays on red.

Soft Buttons:
Used to select the item displayed on the bottom line on the display.

5. CONNECTION

The telephone line cord (included)

CAUTION
Ensure the cords are inserted in the grooves to prevent damage to the connector.

➡ Connect to a KX-TDA Series Business Telephone System (TO MAIN UNIT / PABX).

➡ Connect to a single line telephone for XDP or parallel connections (TO TEL).

CAUTION
Ensure the headset cord is inserted in the hook to prevent damage to the connector.

< Back view>
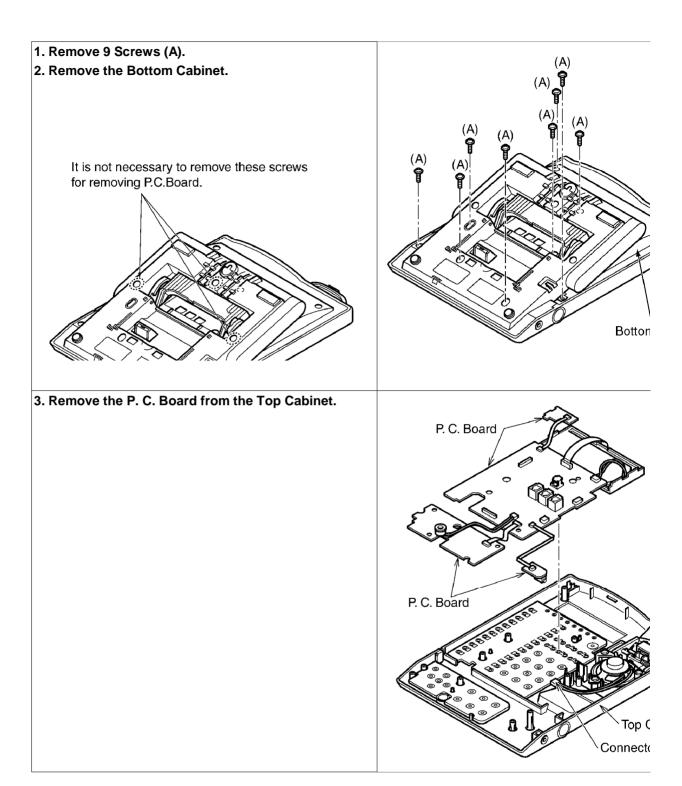

Caution:

Consult your dealer for more details about XDP.

6. DISASSEMBLY INSTRUCTIONS

1. Remove 9 Screws (A).

2. Remove the Bottom Cabinet.

It is not necessary to remove these screws for removing P.C.Board.

7. HOW TO REPLACE A FLAT PACKAGE IC

7.1. PREPARATION

- PbF (: Pb free) Solder

- Soldering Iron

   Tip Temperature of 700°F ± 20°F (370°C ± 10°C)

Note: We recommend a 30 to 40 Watt soldering iron. An expert may be able to use a 60 to 80 Watt iron where someone with less experience could overheat and damage the PCB foil.
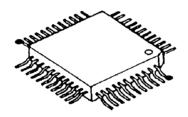

- Flux

Recommended Flux: Specific Gravity → 0.82.

Type → RMA (lower residue, non-cleaning type)

Note: See **ABOUT LEAD FREE SOLDER (PbF: Pb free)** ().
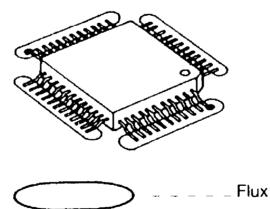

7.2. PROCEDURE

1. Tack the flat pack IC to the PCB by temporarily soldering two diagonally opposite pins in the correct positions on the PCB.
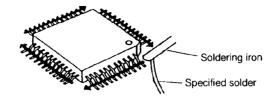

●– – – – – –Temporary soldering point.

Be certain each pin is located over the correct pad on the PCB.

2. Apply flux to all of the pins on the IC.

– – – – –Flux
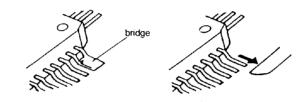

3. Being careful to not unsolder the tack points, slide the soldering iron along the tips of the pins while feeding enough solder to the tip so that it flows under the pins as they are heated.

Soldering iron
Specified solder
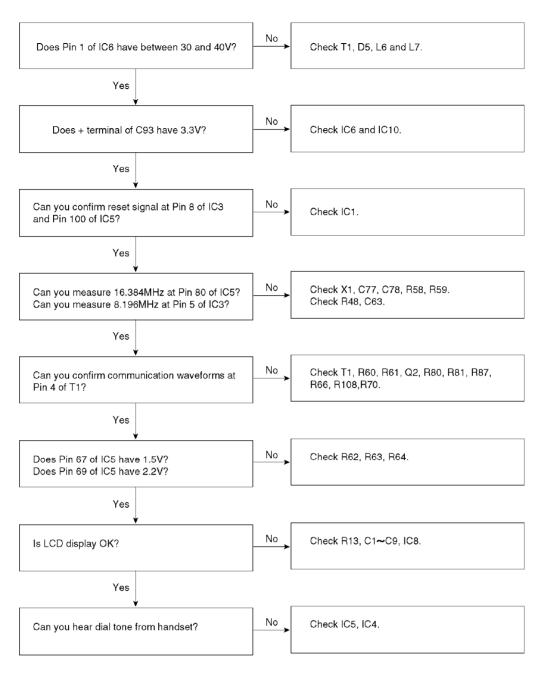

7.3. REMOVING SOLDER FROM BETWEEN PINS

1. Add a small amount of solder to the bridged pins.

2. With a hot iron, use a sweeping motion along the flat part of the pin to draw the solder from between the adjacent pads.

bridge

9. BLOCK DIAGRAM

10. CIRCUIT OPERATIONS

10.1. KEY INPUT CONTROL CIRCUIT

The key data is under the matrix control by 19 to 23, 25, 44, 45(KEYOUT) and 28 to 35(KEYIN) of IC3.
The key information outputted from KEYOUT is inputted into KEYIN, when the key is pressed.

CIRCUIT DIAGRAM

KEY INPUT CONTROL TIMING CHART

When "KEYOUT5" is low status
and the "1" button is pressed,
the key-in information is read.

10.2. LCD CIRCUIT

LCD data are outputted from pin 57, 58, 59,10 and 12 of IC3 to LCD module.

IC8 is an inverter for a charge pump circuit which outputs the voltage necessary for LCD driving.

- 4.5V from -1.2V generated at IC8 as a reference to +3.3V of the power supply voltage is pressurized four times in the LCD module and used as LCD driving voltage(approx. 18V).

LCD contrast is set by electronic volume in the LCD module.

The type of the LCD module is distinguished by pin 62 of IC3.
	Pin 62 of IC3	
L	KX-T7636	24 digits * 6 lines
H	KX-T7630/KX-T7633	24 digits * 3 lines

The lighting of the backlight is controlled by Q1.

- IC3-pin 56 H → Q1-ON → Backlight ON
- IC3-pin 56 L → Q1-OFF → Backlight OFF

10.3. LED CIRCUIT

The lighting of the LED is controlled by pin 19 to 28(Row) and pin 11 to 16(Colum) of IC5.
The LED lights up in a dynamic lighting system.
The duty ratio is 1/8(ON time 1.5ms).
Only D107 of LED for CO7 lights up in a static lighting system.
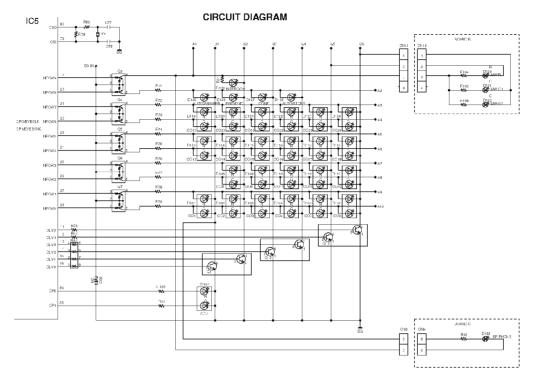

- IC5-pin 55 H : CO7 Green ON
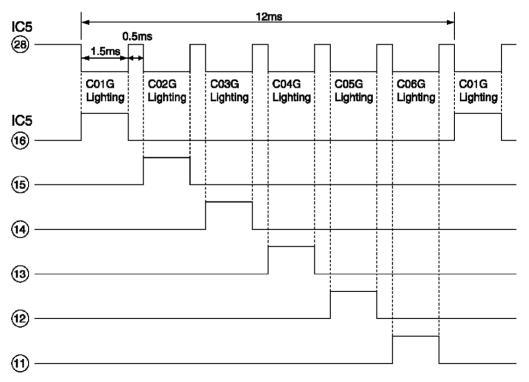

- IC5-pin 55 L : CO7 Green OFF

- IC5-pin 56 H : CO7 Red ON

- IC5-pin 56 L : CO7 Red OFF

CIRCUIT DIAGRAM
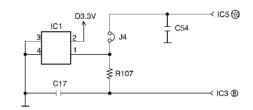

LED DYNAMIC LIGHTING
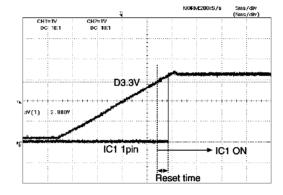

10.4. RESET CIRCUIT

Reset Signal is outputted from IC1 and inputted into IC3 and IC5 at the connection of TEL cord.

Circuit Diagram
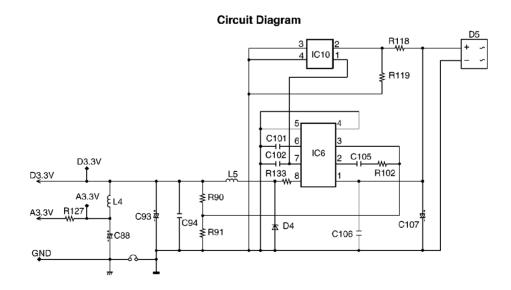

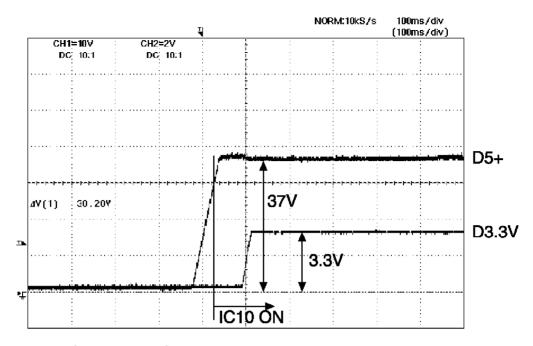

10.5. POWER SUPPLY CIRCUIT

This circuit converts the voltage supplied from PBX into the power supply voltage of +3.3V by IC6(Switching Regulator IC).
IC10 controls the power supply circuit as below to turn IC6 on in low consumption current at starting up.

- Input Voltage approx. 30V or less → IC10-pin 1 L → IC6 OFF
- Input Voltage approx. 30V or more → IC10-pin 1 HiZ → IC6ON

10.6. DATA COMMUNICATION

Function
The data communication circuit serves the following functions:
Information exchanger between PBX and proprietary telephone, key input information as well as data for the LED control, LCD control, voice data, etc. This information is continuously exchanged at all times.
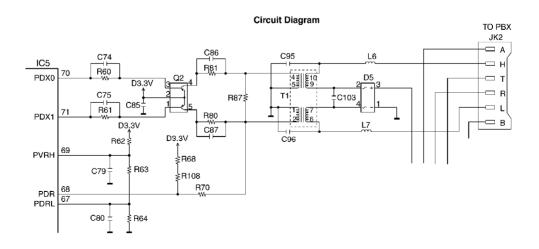

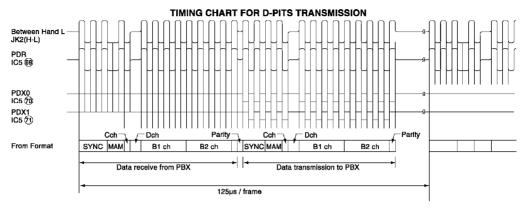

Circuit Operation
The data received from PBX is inputted to the comparator(pin 68) built in IC5 through Pulse Trans T1. The threshold voltage of the comparator is determined by R62 to 64 and inputted to pin 67 and 29.
The data to PBX is outputted from pin 70 and 71 of IC5, drives T1 by Transistor Q2 and transmitted.

TIMING CHART FOR D-PITS TRANSMISSION

10.7. DXDP COMMUNICATION

Function
This circuit performs the same communication as DXDP-compatible DPT and PBX communication connected with DXDP port.

Circuit Operation
The data to Slave DPT is outputted from pin 63 and 64 of IC5 and sent by Transistor Q8 and Q9.
The data from Slave DPT is inputted to the comparator(pin 61) built in IC5.
The threshold voltage of the comparator is determined by R65 to 67 and inputted to pin 60 and 62.
Also, the supplying power to Slave DPT is controlled by a constant current circuit of Q15 as below.
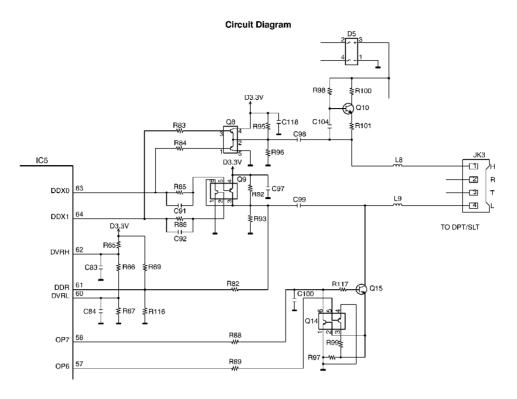

- IC5-pin 58 as H : Constant current circuit ON
- IC5-pin 58 as L : Constant current circuit OFF
- IC5-pin 57 as H : 40mA Feeding (Slave DPT usually)
- IC5-pin 57 as L : 10mA Feeding (Slave DPT at starting up only)

Circuit Diagram

10.8. OPTION DETECTION

When the option is connected with CN3 and CN10, IC3 detects the option connection by the following voltages.

- IC3-pin 63 : 3.3V → No option connection with CN3 and CN10

- IC3-pin 63 : 2.1V → Option connection with CN3 only

- IC3-pin 63 : 1.7V → Option connection with CN10 only

- IC3-pin 63 : 1.3V → Option connection with CN3 and CN10

10.9. ANALOG CIRCUIT

This circuit performs the setting of the call path/vol. adjustment in each call mode by DSP built in IC5.

The audio gain of each call is determined by download data from PBX.

- IC5 sends each audio data to IC4 by PCM interface.

- IC5 receives each audio data from IC4 by PCM interface.

1. Handset Call

Transmitting signal is inputted from handset microphone and amplified by IC4 built-in Amp → A/D conversion → inputted to IC5 in PCM data → Gain adjustment by DSP of IC5 → then sent to PBX.

Transmitting signal inputted from handset microphone is controlled by transmission switching SW IC7 as below.

IC3-pin 52 L : Handset Call

(IC3-pin 52 H : Headset Call)

21

Receiving signal inputted from PBX is → Gain adjustment by DSP of IC5 → D/A conversion after the input to IC4 in PCM data → IC4 built-in Amp output → outputted from IC5 built-in Amp to handset.

2. Headset Call

Transmitting signal is inputted from headset microphone and amplified by IC4 built-in Amp → A/D conversion → inputted to IC5 in PCM data → Gain adjustment by DSP of IC5 → then sent to PBX.
Transmitting signal inputted from headset microphone is controlled by transmission switching SW IC7 as below.
IC3-pin 52 H : Headset Call
(IC3-pin 52 L : Handset Call)
Receiving signal inputted from PBX is → Gain adjustment by DSP of IC5 → D/A conversion after the input to IC4 in PCM data → IC4 built-in Amp output → outputted from Q16(transistor for buffer) to headset.

3. Speakerphone Call

Speakerphone call realizes all double-call by DSP(echo canceller) built in IC5. For a call in the most appropriate condition, DSP checks voice level of the calling party, acousticity in a room, voice level of the other party and state of the line of contact, and cancels echo in transmitting and receiving at the start of calling. It operates in a half double-call state in a few seconds for the check.
Transmitting signal is inputted from SP phone mic. and amplified by IC4 built-in Amp → A/D conversion → inputted to IC5 in PCM data → Gain adjustment by DSP of IC5, then sent to PBX through echo canceller.
Receiving signal inputted from PBX is → Gain adjustment by DSP through echo canceller of IC5 → inputted to IC4 in PCM data → D/A conversion → IC4 built-in Amp output → outputted from IC2(Amp) to speaker.
Power Amp IC2 is controlled as follows;
IC3-pin 51 L → IC2-ON
IC3-pin 51 H → IC2-OFF

15. REPLACEMENT PARTS LIST

1. RTL (Retention Time Limited)
  Note:
  The marking (RTL) indicates that the Retention Time is limited for this item.
  After the discontinuation of this assembly in production, the item will continue to be available for a specific period of time. The retention period of availability is dependent on the type of assembly, and in accordance with the laws governing parts and

product retention.
After the end of this period, the assembly will no longer be available.

2. **Important safety notice**
Components identified by ⚠ mark have special characteristics important for safety. When replacing any of these components, use only manufacture's specified parts.

3. **The S mark means the part is one of some identical parts. For that reason, it may be different from the installed part.**

4. **ISO code (Example: ABS-HB) of the remarks column shows quality of the material and a flame resisting grade about plastics.**

5. **RESISTORS & CAPACITORS**
Unless otherwise specified;
All resistors are in ohms (Ω) K=1000 Ω , M=1000k Ω
All capacitors are in MICRO FARADS (μ F) P= μ μ F

15.1. CABINET AND ELECTRICAL PARTS

Ref. No.	Part No.	Part Name & Description	Remarks
1	PSKM1083Y1	CABINET BODY (for KX-T7633)	ABS-HB
1	PSKM1083Y2	CABINET BODY (for KX-T7633-B)	ABS-HB
2	PSHR1251Z	TRANSPARENT PLATE (LARGE)	
3	PSGD1061Z	TEL. CARD (LARGE)	
4	PQHR576Z	TRANSPARENT PLATE (SMALL)	
5	PQHP532X	TEL. CARD (SMALL)	
6	PQKE10070Z3	LID, HOOK KNOB (for KX-T7633)	ABS-HB
6	PQKE10070Z1	LID, HOOK KNOB (for KX-T7633-B)	ABS-HB
7	PSGP1075Z	COVER, LED LENS	ABS-HB
8	PSKK1038Z1	LID, SHAFT COVER	ABS-HB
9	PSKM1084Z1	CABINET BODY, APRON (for KX-T7633)	ABS-HB
9	PSKM1084Z2	CABINET BODY, APRON (for KX-T7633-B)	ABS-HB
10	PSBH1005Z1	PUSH BUTTON, HOOK (for KX-T7633)	ABS-HB
10	PSBH1005Z2	PUSH BUTTON, HOOK (for KX-T7633-B)	ABS-HB
11	PSUS1018Z	TORSION SPRING	
12	PQJM122Z	BUILTIN-MICROPHONE	
13	PSHG1216Z	SPACER, MIC RUBBER	
14	PSJS02P14Z	CONNECTOR, 2 PIN	
15	PQAS57P03Z	SPEAKER	
16	PSGP1077Z	COVER, LCD HOLDER	PC-HB
17	L5DAALC00001	LIQUID CRYSTAL DISPLAY	
18	A4LZGD000001	FLUORESCENT LAMP, BACK LIGHT UNIT	
19	PSBX1092Z1	PUSH BUTTON, SOFT (for KX-T7633)	ABS-HB
19	PSBX1092Z2	PUSH BUTTON, SOFT (for KX-T7633-B)	ABS-HB
20	PSBX1091Z1	PUSH BUTTON, FUNCTION (for KX-T7633)	ABS-HB
20	PSBX1091Z2	PUSH BUTTON, FUNCTION (for KX-T7633-B)	ABS-HB
21	PSBX1089Z1	PUSH BUTTON, DIAL	ABS-HB
22	PSYX1005Z1	PUSH BUTTON, 6 KEY (for KX-T7633)	ABS-HB
22	PSYX1005Z2	PUSH BUTTON, 6 KEY (for KX-T7633-B)	ABS-HB
23	PSBC1027Z3	PUSH BUTTON, NAVIGATOR KEY	ABS-HB
24	PSBX1090Z1	PUSH BUTTON, CO LINE (for KX-T7633)	ABS-HB
24	PSBX1090Z2	PUSH BUTTON, CO LINE (for KX-T7633-B)	ABS-HB
25	PSBC1029Z1	PUSH BUTTON, CANCEL (for KX-T7633)	ABS-HB
25	PSBC1029Z2	PUSH BUTTON, CANCEL (for KX-T7633-B)	ABS-HB
26	PSBC1026Z3	PUSH BUTTON, ENTER	ABS-HB
27	PSSX1029Z	KEYBOARD SWITCH, MAIN PART	
28	PSSX1019Z	KEYBOARD SWITCH, APRON PART	

Ref. No.	Part No.	Part Name & Description	Remarks
29	PSJE1031Z	LEAD WIRE	
30	PSJE1030Z	LEAD WIRE	
31	PSJE1032Z	LEAD WIRE	
32	PSHR1236Z	GUIDE	POM-HB
33	PSKF1054Z1	LOWER CABINET COVER (for KX-T7633)	ABS-HB
33	PSKF1054Z2	LOWER CABINET COVER (for KX-T7633-B)	ABS-HB
34	PSKK1039Z1	LID, CONNECTOR COVER (for KX-T7633)	ABS-HB
34	PSKK1039Z2	LID, CONNECTOR COVER (for KX-T7633-B)	ABS-HB
35	PSBE1003Z1	ADJUST STAND (for KX-T7633)	ABS-HB
35	PSBE1003Z2	ADJUST STAND (for KX-T7633-B)	ABS-HB
36	PSHG1233Z	SPACER, RUBBER	
37	PSKM1085Z1	CABINET BODY, BASE (for KX-T7633)	ABS-HB
37	PSKM1085Z2	CABINET BODY, BASE (for KX-T7633-B)	ABS-HB
38	PSKL1014Z1	STAND (for KX-T7633)	PS-HB
38	PSKL1014Z2	STAND (for KX-T7633-B)	PS-HB
39	PSYF1036Z1	CABINET COVER, BASE ASS'Y (for KX-T7633)	PS-HB
39	PSYF1036Z2	CABINET COVER, BASE ASS'Y (for KX-T7633-B)	PS-HB
39-1	PSHA1010Z	RUBBER PARTS, FOOT	
39-2	PSHA1011Z	RUBBER PARTS, CUSHION	
40	PSGT2245Z	NAME PLATE (for KX-T7633)	
40	PSGT2256Z	NAME PLATE (for KX-T7633-B)	
41	PSJS02P15Z	CONNECTOR, 2 PIN	
42	Not Used		
43	Not Used		
44	PSQT1907Z	FCC CAUTION LABEL	

15.2. ACCESSORIES AND PACKING MATERIALS

Ref. No.	Part No.	Part Name & Description	Remarks
A1	PSJA1068Z	CORD, TELEPHONE	S
A2	PSJA1084Z	CORD, HANDSET (for KX-T7633)	
A2	PSJA1084X	CORD, HANDSET (for KX-T7633-B)	
A3	PQJX2PS409Z	HANDSET (for KX-T7633)	
A3	PQJX2PKA409Z	HANDSET (for KX-T7633-B)	
A4	PSQX2607Z	INSTRUCTION BOOK (QUICK REFERENCE GUIDE)	
A5	PSQW1843Z	LEAFLET	
P1	PSZKT7633M	GIFT BOX ASS'Y (for KX-T7633)	
P1	PSZKT7633MB	GIFT BOX ASS'Y (for KX-T7633-B)	
P2	XZB34X48A05	PROTECTION COVER

16. FOR THE SCHEMATIC DIAGRAM

Note:

1. DC voltage measurements are taken with an oscilloscope or a tester with a ground.

2. The schematic diagrams and circuit board may be modified at any time with the development of new technology.

Important safety notice
Components identified by ⚠ mark have special characteristics important for safety. When replacing any of there components, use only manufacturer's specified parts.
